ACKNOWLEDGMENTS

Please remove the texts in red which are given only as a guide.

It is customary and good manners to pay gratitude towards individuals who have played an important role during your thesis work period.

Keep in mind that one has to use one's own words when writing an acknowledgement. Plagiarism is unauthorized.

AI Assistance Disclosure

I used AI tools during the preparation of this thesis for the following purposes:

- **Research/Idea Generation:** [Describe how AI was used, if applicable. If not, write N/A]
- **Coding/Technical Work:** [Describe how AI was used, if applicable. If not, write N/A]
- **Writing/Editing:** [Describe how AI was used, if applicable. If not, write N/A]
- **Other Assistance:** [Describe any other use, if applicable. If not, write N/A]

AI Tool(s) Used: [Name of AI tool(s)]

I confirm that all AI-generated or AI-assisted outputs used in this thesis were reviewed and critically evaluated by me. Where applicable, AI-assisted code was tested and verified before use. I remain responsible for the [NAME THE PARTS OF YOUR THESIS WHERE AI WAS USED] of this thesis.

Please remove the texts in red which are given only as a guide.

Enter the list of Acronyms / Abbreviations. Few examples are shown in the following

LED	:	Light Emitting Diode
MOS	:	Metal Oxide Semiconductor

ABSTRACT

All the pages have been formatted in the accepted font and margin alignment. This is a simple BSc thesis template that can be used for directly typing in your content. However, if you paste your text into the document, do so with caution as pasting could produce varying results. When directly typing into the title page and signature page, the appropriate information should be filled in the required fonts. When writing an abstract, bear in mind an abstract is a short descriptive summary of your thesis. The number of words accepted might vary e.g. 200-250 words. A BSc thesis abstract need not exceed two pages. Abstracts are typically written last although they are the most important part of the thesis. They should have a little bit of everything: the background, the scope of your project, the purpose, findings and conclusions. An abstract is neither paragraphed nor cited. It should not be written as a literature review or a discussion of results. In a simplistic manner, your abstract, in a few words, should answer the questions: why should one care about your research; how did you get your results; what did you learn, find, create, invent; and finally what do your results imply?

Keywords: most, important, words, repeatedly, used.

[KEEP 5 KEYWORDS RELATED TO YOUR RESEARCH]

CHAPTER 1

INTRODUCTION

Please remove the texts in red which are given only as a guide.

Typically the first chapter is the Introduction. The main goal of your introduction is to identify a problem that is worthy of investigation. It must also provide some idea of your research goals and approach to research. Specific objectives can be introduced in the introduction chapter or they can be saved for later after you've provided additional background on the topic and state of the current research and its gaps. The Introductory chapter often concludes with a summary of the organization of the thesis, including identification of the general content of specific chapters and appendices.

1.1 Section Title

Please remove the texts in red which are given only as a guide.

The Section has the 2nd order heading. Enter subject matter for Sub-Section.

Ideally, chapter one defines the overall importance of the problem areas and provides an introduction into what you did, chapter two is why you did it in the context of what was previously known, three is how you did it, four is what you found and five is what it all

means – putting the pieces together, (what's your contribution to the research field).

It should be noted that the objectives of your research define the OUTCOME, i.e. what will be learned.

These define the required steps; they do not define the outcome so they are NOT objectives.

Some theses and dissertations can have some chapters written as manuscripts that can be submitted to peer-reviewed scientific research journals. In that scenario, the grad student should be the principal author of the pending articles. The thesis or dissertation that includes manuscripts as chapters are not exempt from writing an introduction, background/literature review and overall conclusions and recommendations.

1.2 Section Title

Please remove the texts in red which are given only as a guide.

This template uses LaTeX styles extensively to help keep your work in the proper format. **These paragraphs use the "thesis-body text" style that is set for Times New Roman, 12 point font with double spaced lines and extra spacing between paragraphs (no need for hard carriage returns).**

1.2.1 Sub-Section Title

Please remove the texts in red which are given only as a guide.

There are also styles for headers, equations, captions and bulleted lists that you can choose to use. See examples throughout this template.

1.2.2 Sub-Section Title

Please remove the texts in red which are given only as a guide.

This is a sub-section and thus begins with the second order heading. Enter your text here.

1.3 Section Title

Please remove the texts in red which are given only as a guide.

The chapters are divided into sections where each section is numbered as shown in the following. Each subsequent subsection will have a next order heading.

The Section has the 2nd order heading. Enter subject matter for Sub-Section.

The equations can be written using the `equation` environment. The equations are numbered typically as shown below. The equation numbering can follow different styles. Make sure you are aware of the style commonly used in your area. Sometimes un-numbered equations are used (use `equation*` for those).

$$z(t) = A_c\left[1 + \mu x(t)\right] e^{j\omega_c t} \tag{1.1}$$

$$a(t) = A_c\left[1 + \mu x(t)\right] \tag{1.2}$$

Chapter breakdown should be included in the last paragraph of this Section.

CHAPTER 2

LITERATURE REVIEW

Please remove the texts in red which are given only as a guide.

The background and literature review section needs to provide sufficient fundamental background information about the subject to support your objectives, hypothesis (or research questions) and methods, and review the pertinent literature related to the specific problem/hypothesis you are addressing.

The following lines are samples for referencing patterns:

In [6]–[8], the authors introduced ———-***when using multiple referencing in one line***

A recent study [16] investigated———-

(Tip: add the paper to `references.bib` and write `\cite{zheng2018}` in your text; the number, e.g. [1], is filled in automatically.)

This page can be used as the sample for subsequent chapters. In the following the Sub-Sections are also enumerated.

2.1 Section Title

Please remove the texts in red which are given only as a guide. In the following it is shown how the equations may be inserted using LaTeX's `equation` environment.

$$y = \oint_{x=0}^{100} e^{-x}\, dx \tag{2.1}$$

2.1.1 Sub-Section Title

Please remove the texts in red which are given only as a guide.

This page can be used as the sample for subsequent chapters. In the following the Sub-Sections are also enumerated.

2.1.2 Sub-Section Title

This page can be used as the sample for subsequent chapters. In the following the Sub-Sections are also enumerated.

2.2 Section Title

2.2.1 Sub-Section Title

This page can be used as the sample for subsequent chapters. In the following the Sub-Sections are also enumerated.

2.2.2 Sub-Section Title

This page can be used as the sample for subsequent chapters. In the following the Sub-Sections are also enumerated.

CHAPTER 3

METHODOLOGY

Should include System Architecture figure in this chapter.

CHAPTER 4

RESULT ANALYSIS

Please remove the texts in red which are given only as a guide.

The results and discussion are very often combined in this chapter. The division of Results and Discussion material into chapters is usually best done according to subject matter.

Make sure that you have described the conditions which were obtained for each set of results. What was held constant? What were the other relevant parameters? Make sure too that you have used appropriate statistical analyses. Use appropriate statistical tests.

In most cases, your results need discussion. What do they mean? How do they fit into the existing body of knowledge? Are they consistent with current theories? Do they give new insights? Do they suggest new theories or mechanisms?

Try to distance yourself from your usual perspective and look at your work. Do not just ask yourself what it means in terms of the orthodoxy of your own research group, but also how other people in the field might see it. Does it have any implications that do not relate to the questions that you set out to answer?

4.1 Section Title

Please remove the texts in red which are given only as a guide.

Following is a figure inserted to show how the Figures are captioned and used. The Caption must contain the index of the figure/plot and a concise description. The figure is placed exactly where it is written ([H]), so no empty gap is left on the page.

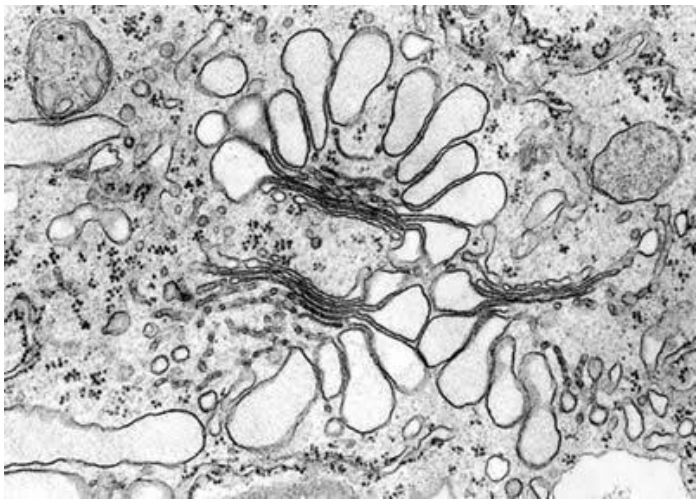

Figure 4.1 TEM Image

4.1.1 Sub-Section Title

Please remove the texts in red which are given only as a guide.

This page can be used as the sample for subsequent chapters. In the following the Sub-Sections are also enumerated.

4.1.2 Sub-Section Title

This page can be used as the sample for subsequent chapters. In the following the Sub-Sections are also enumerated.

4.2 Section Title

4.2.1 Sub-Section Title

This page can be used as the sample for subsequent chapters. In the following the Sub-Sections are also enumerated.

In the following a Table is shown.

Table 4.1 Measurements of Weather Conditions

Date	Temperature (maximum)	Temperature (minimum)	Humidity (maximum)	Humidity (minimum)	Wind Speed (average)

4.2.2 Sub-Section Title

This page can be used as the sample for subsequent chapters. In the following the Sub-Sections are also enumerated.

CHAPTER 5

CONCLUSION AND FUTURE WORK

Summarize your key findings, contributions, limitations, and suggested directions for future work here.

References

Please remove the texts in red which are given only as a guide. The following is an example of writing the references which have been referenced to in the Thesis. Standard IEEE reference style should be used. Samples: [1] journal, [2] conference, [3] report, [4] book, [5] arXiv preprint, [6] webpage. If anyone wants, he/she can use APA style instead of IEEE style.
